

# SKID STEER MOUNTED 3-POINT ADAPTOR

The EZ-3-Point Skid Steer mounted 3-Point Adaptor is an inexpensive tool that allows you to run Non-Powered Agricultural attachments on your skid steer loader. The flexibility of this attachment allows you to adjust the lift arms from Category 0 - 2 and then fix them so they will not slide around when you are operating the implement. All other attachments of this type have sliding arms that will allow the implement to slip off when under heavy operations.

The quick hitch design is another feature that is only available here. It allows you to connect to the implement without getting off the skid steer. The quick hitches can be ordered in Category 1 (7/8") or Category 2 (1-1/8") dimensions.

The top link height is adjustable and may be removed if not required and also comes in Category 1 or 2 dimensions.

Be the first one you know to own this amazing attachment. The design and quality of the construction is second to none. The adjustability allows you to attach this to almost any implement ever made. The quality of the hitches insures a firm grip on every implement without fear of losing them when the going gets tough.

The 2" Reese adaptor is built by Reese with factory original parts including a forged collar which keeps the end from splitting under heavy loads. It is not just a piece of tubing welded on a plate like every other adaptor made.

These small but important features make this attachment stand out above all of the rest.
