Tracks - Solideal Rubber Tracks

New Rubber Design!

When you need traction, strength and the suppleness of rubber to not damage surfaces, we have a solution.

Easy to use.

Other designs of this type of track were very flawed because they were a continuous loop. This made them extremely hard to get on the machine.

The Solideal OTT system uses a master link system to allow you to assemble the tracks while leaving the tires on the machine.

- You require 1 1/2 inches of sidewall clearance to your frame to allow tracks to run free without hitting your frame.
- Spacers are available for machines that require additional clearance.
- Tracks are easily installed in 15 minutes after initial sizing when new.
- No mounting tool is required..
- If tightened properly with properly inflated tires, our tracks will not come off.
- Ships via common carrier truck ground freight.
- Weight – 300 - 800 lbs. depending on configuration.
