

## EZ-Stumper

### Compact Stump Grinder:

This is yet another machine adapted from larger equipment to work on a skid steer. What this means to the operator is that this is already a proven design. The only difference is the unit has been adapted to a skid steer. You have to see it to believe just what this unit can do.

Entire businesses are being created around this product because of the environmental concerns over stump removal and burning. Customers are far more likely to grind today than ever. The standard hourly rate for grinding is much higher than traditional skid steer services.

Because the wheel is fixed and you move your skid steer, you never remove power from the cutting head insuring a fast and powerful cut.

Buy yours today and start making huge profits.

### Features:

- Grind stumps within 6" of a building.
- Compact design allows you to get in and out of tight locations. Many of these locations could not be even accessible with a regular stump grinder.
- 28" carbide tipped cutting wheel. The 13 cutters may be sharpened and replaced in minutes.
- Grind above and below ground. Care should be taken to insure that rocks are removed from the tree base to insure cutter life.
- Pressure regulated so you cannot apply too much pressure at once.
- Flow regulated just in case you manage to apply too much pressure and stall the motor.
- Regular flow version runs from 17 GPM - 25 GPM @ 3000 PSI.
- High flow version available that runs 25 - 40 GPM @ 4200 PSI.
- Weight - 650 lbs.
